The advantages of two-way radio and mobile phones combined

ChatterPTT combines the benefits of two-way radio features allowing one to many and group calls with the extended coverage of cellular phone networks in one integrated smart device.

- **Cross network compatibility**
  Connect and communicate across any platform including cellular networks (2G, 3G, 4G), Wi-Fi platforms, broadband and two-way radio networks, providing maximum possible coverage

- **One to one or multiple groups**
  ChatterPTT can accommodate up to 250 users and each can be configured with a unique profile, defining talk groups and private call capabilities.

- **Reliable secure communication**
  Reliable, highly secure, business critical communications whether connecting via cellular, LTE networks or Wi-Fi.

- **Instant text imaging and messaging**

- **GPS position for location tracking**
  Track, locate and identify where your workforce are in the field for improved Health & Safety

- **Priority Call for emergency situations**
  Dedicated Emergency Alert button on supported devices

- **Wide choice of supported devices**
  Choose from an extensive range of high quality dedicated Push to Talk (PTT) devices including in vehicle or desk top solutions

- **Professional audio accessories & ancillaries**
  Use similar high quality audio accessories offered with two way radio devices including speaker mics and covert surveillance kits

ChatterPTT
smart team communications

Work smarter with ChatterPTT

ChatterPTT is designed to offer business-critical resilient communications for small, medium and large enterprises seeking more efficient ways to communicate.

- Communicate rapidly and efficiently with your work force whereever you have a wifi or cellular connection anywhere in the world
- Track and monitor users via GPS location for improved Health & Safety
- Reduce mobile & SMS messaging costs
- Transmit voice instructions instantly to individuals or groups
- No complex or expensive infrastructure required
- Use the same smart device to run other work centric applications, e.g. job ticketing
- Secure and reliable communications
- Scalable cloud based solution - Add users instantly
- Hosted solutions also available

Connect work teams anywhere on any device

Integrate smart devices and two-way radios

The ChatterPTT service can be linked with existing analogue, digital and trunked radio systems allowing users to connect to a radio network when outside radio coverage via cellular or Wifi networks.
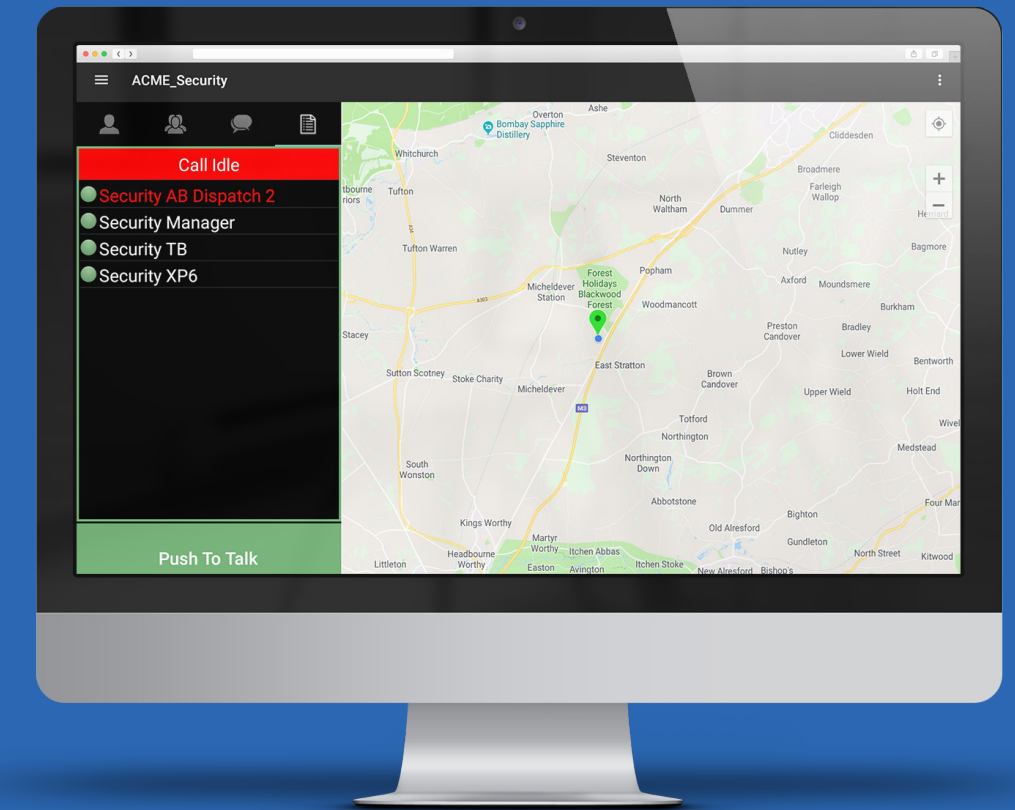

This enables remote users, supervisors or managers to connect into a localised radio network anywhere in the world as long as they have a wifi or cellular connection.

Connect smart devices to smart devices

The ChatterPTT solution offers your team the ability to communicate between multiple smart devices instantly at the push of a button. This makes group communications more rapid and efficient and for incident management in the event of an emergency, becomes a critical feature when dealing with such scenarios.

Connect PC's, laptops and tablets

ChatterPTT is available as a software application for desktop PC's, laptops and tablets allowing organisations to re-use existing assets for group communication and your team to select the best device to suit their requirements.

- Customise settings and push to the device instantly
- Map users' current GPS locations or view track history of specific users
- View "active device" status
- Record voice communications

Device + SIM + ChatterPTT = PoC

1. Buy or hire a dedicated PoC device or use another device of your choice
2. Buy a SIM card to provide access to the required networks via the ChatterPTT cloud.
3. Subscribe to ChatterPTT service. This can be supplied as a stand-alone subscription or as a package with a dedicated device and data SIM card. Subscription is per device.

The ChatterPTT software app is available by monthly or annual subscription.
